About Us

We are a Texas based corporation founded in 1996 by senior technical consultants. Our goal is to do the right job with the right people. All our employees have the competency, integrity, and experience to meet this goal.

Our consultants are senior IT professionals whose skills provide the leadership necessary to successfully complete your projects. These skills allow us to focus on the critical roles and processes you require including architecture design, team management, process modeling, and database administration. The combination of strong leadership and focus of services has allowed us to thrive through the boom period and survive the subsequent weakness in the IT services market. As the demands on IT increase, we are positioned to provide the critical leadership demanded by our clients.

Services

If you depend on outside IT support, we can supply a complete solution to your business problem. This includes providing project-based development covering every phase from analysis to deployment. Through this option we can provide a virtual IT infrastructure to support full life cycle development customized to your requirements.

You might have your own IT department, yet require specialized skills or experience. We can provide senior consultants to fill key roles such as system architect or lead designer. Our consultants can help plan and design your solutions as well as provide critical mentoring to help you build a more diverse and self-sufficient team.

Even the largest clients often lack sufficient IT personnel resources to devote to all desired projects. We can supplement your staff to help address your projects that may otherwise fall behind schedule or not get done at all. Our consultants have the ability to step into your environment and become productive with minimal effort.

Contact

Contact us for more information about how we can help address your critical projects. We will provide a quote or share how we help Fortune 500 clients like Hewlett-Packard, Texas Instruments, Raytheon, Ericsson, and Occidental Chemical.
